

Daisymond Munashe Chiboora

Chief Technology Officer & Full-Stack Software Engineer — Fintech, Compliance & Platform Architecture

Lusaka, Zambia · daisymondchiboora@gmail.com · +260 97 5265 450

Full-stack engineer and technical leader with 8+ years building production systems across fintech, government trade and tax compliance, and AI-driven analytics for organisations across Southern and Eastern Africa. As CTO of Maveriq Technologies, owns architecture, security and delivery across a multi-product SaaS suite — from a government-certified e-invoicing integration to a SOC 2 readiness programme — while still shipping hands-on: Solidity contracts, OCPP charge-point protocols, Laravel/FastAPI services, and the React/Next.js front ends in front of them. Recent work has centred on turning single engagements into durable platforms: a customs e-seal network spanning 21 COMESA member states, and an accounting product that grew into a connected suite of six business tools.

Employment History

Core Expertise

LANGUAGES

- Python
- PHP
- JavaScript/TS
- Java
- Swift
- Solidity
- R

FRONTEND

- React
- Next.js
- Vue.js
- React Native
- Tailwind
- Ant Design
- MUI

BACKEND

- Laravel
- Node.js/Express
- FastAPI
- Spring Boot
- Django

DATA & AI

- MySQL
- PostgreSQL
- MongoDB
- Firebase
- spaCy / NER
- scikit-learn
- TensorFlow
- Kafka

Chief Technology Officer · Maveriq Technologies

Mar 2023 – Present

Multi-product SaaS suite — accounting, strategy execution, personal finance & risk

MAVERIQ ACCOUNTING maveriqaccounting.com

- Designed and built **Myles**, an AI analytics agent for the platform, training a custom spaCy NER model to turn raw sales, purchase and receivables data into plain-language business insight.
- Delivered a **ZRA Smart Invoice** integration — Zambia Revenue Authority's VSDC e-invoicing standard — including TLS certificate/truststore provisioning for the tax authority's sandbox device, verified end-to-end with purchase, sale and credit-note flows all returning a confirmed VSDC result and signed receipt/QR data. **VSDC verified**
- Integrated the DPO Pay gateway for subscription billing, secured the API with Laravel Sanctum, and built realtime notifications across web and mobile using Laravel Reverb and Pusher; also shipped the companion mobile app in React Native.

STRATIFY stratify.africa

- Architected a multi-tenant strategy-execution platform (plans, KPIs, initiatives, budgets, culture surveys, team chat) across eight containerised microservices — React/Vite, Laravel 12, a FastAPI recommendation engine, Node.js/Socket.IO realtime, MariaDB, MongoDB, Redis and Caddy.
- Led **SOC 2 Type I readiness scoping**: defined the Trust Services Criteria in scope (Security, Availability, Confidentiality, Processing Integrity), built the control matrix, risk register, vendor register, data inventory and incident response plan, and ran the pre-audit gap analysis ahead of formal certification. **SOC 2 scoping**

FINANCIAL FITNESS buildingfinancialfitness.com

- Personal-finance "super app" PWA — React/TanStack Router, Laravel 12, PostgreSQL and Valkey behind Caddy — with phone-OTP authentication, a versioned service-worker update pipeline, and realtime notifications via Web Push (VAPID) and Server-Sent Events, hardened for iOS/Safari PWA constraints.

MAVERIQ WORKFLOW maveriqprofessionals.com

- Practice-management tool for accounting teams — client and engagement tracking, chart of accounts, tax and KYC workflows, deliverables and an internal training academy.

SECURITY & COMPLIANCE

ZRA Smart Invoice

OCPP 1.6/2.0.1

DPO Pay

PawaPay

Africa's Talking

Pusher / Reverb

Security Practice

Leads security and compliance across the Maveriq suite as CTO: SOC 2 Type I readiness (control matrix, risk register, incident response plan) for Stratify; TLS/certificate provisioning for a government tax-authority integration; Sanctum/OAuth2/JWT API authentication; TOTP-based MFA, RBAC/ABAC role design and audit logging on financial platforms; routine dependency and vulnerability auditing across production services.

Education

BEng, Software Engineering
Zhejiang University of Technology
Hangzhou, China
2015 – 2019

References

- Business-development and portfolio-tracking tool for the group's ventures — market intel, capital management and idea/hypothesis pipelines, on Sanctum-authenticated APIs with Pusher realtime.

RISKIQ Risk & Compliance Manager

- Role-based (admin / super-admin / user) risk register and controls-tracking tool with PDF export for audit-ready reporting.

Tribal Nexus and Astro Mobile
Africa available on request.

Tech Lead · Spark Ventures Zambia Oct 2023 — Present

sparkventures.africa

- Led development of a digital finance platform combining **Trade Finance** for SMEs with salary-backed **Payroll Loans**, on a Laravel + Vue.js stack.
- Integrated PawaPay for mobile-money disbursement and collection (MTN, Airtel) and Africa's Talking for SMS notifications; hardened the platform with TOTP-based multi-factor authentication, geofenced attendance verification and full audit logging across the super-admin/sub-admin role hierarchy.
- Grew the platform's scope into a combined HR-and-lending system (Spark HR) covering payroll, attendance and investor fund allocation, with CI/CD via GitHub Actions and GitLab CI for continuous delivery without service downtime.

Tech Lead · Ideate Africa 2025 — Present

Ciera — client metrics & survey platform · ideateafrica.org

- Lead engineering on Ciera: a React web client plus the "Survey Ninja" survey tool over a Laravel API, handling flexible year/month/day metrics import, bulk spreadsheet upload, survey/response compilation and reporting across client projects.
- Run a hybrid MySQL/MongoDB storage layer for structured metrics alongside unstructured survey data, deployed via Docker Compose with GitHub Actions delivering to the production VPS.

Software Developer · COMESA Secretariat (contract)

Feb 2021 — Present

CVTFS — COMESA Virtual Trade Facilitation System

- Built core services (Laravel + Java Spring Boot microservices) for a system that tracks fuel tankers, bulk and containerised cargo across 21 COMESA member states using electronic seals.
- Implemented an Apache Kafka pipeline to stream e-seal data in real time and built VueJS dashboards used by national revenue authorities — including Malawi Revenue Authority and DGDA-DRC — to monitor cargo status and compliance.
- Delivered a prototype invoicing module generating monthly cross-border settlement invoices for implementing states, and secured the API with Spring Security plus scheduled monitoring via Java cron jobs.
- Trained customs officials across the region on the platform and maintained its integration with member states' ASYCUDA customs systems.

Software Developer · Astro Mobile Africa

2019 — 2021

- **Pulse Fitness & Health** (07/2019–12/2019): built iOS/Android apps and a Laravel/Django web portal connecting patients with medical practitioners and insurers including PSMAS Zimbabwe, syncing wearable health-band data over Bluetooth into MySQL/Firebase.
- **eShagi** (01/2020–06/2020): led backend development (Node.js, AWS EC2/RDS) of an instant loan and credit-issuance system for Zimbabwe's civil servants, integrating the Salary Service Bureau for KYC checks and a scikit-learn model for loan-eligibility scoring.

Earlier career —

Software Developer · YooSource China

Aug — Nov 2018

- Built the AI-driven product recommendation experience (React, React Native, TensorFlow, scikit-learn) for a manufacturer-to-reseller e-commerce platform, plus its Node.js/Express APIs and MongoDB/PostgreSQL backend.

Web Application & UI Developer · ABCommunications

Jun — Oct 2017

- Built the CMS and front end for ZiFM's news website (VueJS, Laravel), integrating an NLP-based fake-news detection pipeline (Hugging Face Transformers) for content verification.

Junior Software Engineer · Tribal Nexus

Jun 2017 – Apr 2019

- **Project Baracoin:** wrote Solidity business logic and consensus-related tooling for a blockchain-based remittance network (BRC/BRT tokens), plus Android/iOS clients and technical documentation.

Independent Engineering Projects

EVCPS – Electric Vehicle Charge Point System

An EV charging network management platform: Next.js operator dashboard and driver PWA over a Laravel API gateway, backed by a Python/FastAPI engine implementing the OCPP 1.6 and 2.0.1 charge-point protocols against MySQL and MongoDB, including working charger simulators for both protocol versions.
